Please come prepared to lift any containers that you bring when they are full. *We are unable to lift full containers or to help load any vehicles.*

Keep an eye out for the Home Winemaker's dinner in 2024!

*Free Beginning Wine Making Classes
Every Saturday during the season at 2:00pm*

PHONE ORDERS accepted M-F only
JUICE PICK-UP
THURSDAY THROUGH SUNDAY

Dear Friends and Customers,

Welcome to the 2023 home wine making season! Do to a spring freeze, there is a shortage of some varieties. **There will be a full catalog available online and in-store.** Thank you and enjoy the season. We'll see you soon!

We will be offering *some pre-orders of fresh crushed red grapes of select varieties at the time of crushing.* A minimum of 50# order is required for crushed reds.

Any orders filling our 1 or ½ gallon jugs must be pre-ordered.

All of our juices are sulfited to prevent oxidation prior to pick-up, so there is **no need to add meta-bisulfite prior to fermentation**. Many of our reds however, have not received the same amount of sulfites as many of our whites (we do not want to discourage Malo-Lactic fermentation). SO² content would seldom exceed 40ppm for reds and 80ppm for whites but is normally much lower. Please inquire before adding more.

We ask that all customers order juices in advance of pick-up, as we cannot guarantee the availability of any variety for last minute pick-up. Unfortunately, ***we cannot help load full containers into vehicles***, please be prepared to load your own vehicles after filling, no exceptions.

We do not require a deposit on any juice orders, and with your help, we can continue this policy. If you wish to cancel your order, please do so as early as possible, we appreciate any cancellations as well as orders.

We will be UNABLE to refill containers smaller than 2 gallons

Due to certain weather conditions, we may bring some varieties in earlier or later than what we have printed in the catalog.

Please check our website for updates.

Please pre-order chemicals/supplies to help us serve you better during your visit.

Phone orders Monday-Friday ONLY

607.678.4003 or order online:

www.fulkersonwinery.com/juice

2023 GRAPE JUICE, crush, and u-pick pricing

Containers under 2 gallons can not be filled. Gallons and ½ gallons will be available pre-ordered only, in OUR containers. 50# minimum for crushed fruit.

Ordering now available online: www.fulkersonwinery.com/juice

VARIETY	COLOR	DATES AVAILABLE	JUICE \$/gallon	CRUSH \$/50#	U-PICK \$/#
Diamond	W	Sept. 14 – 17	8.25		
Niagara	W	Sept. 14 – 24 (2 weeks)	5.75

Catawba	W	Oct. 12 – 15	5.60		
Riesling	W	Oct. 12 – 15	18.00		1.48
Traminette	W	Oct. 12 – 15	11.50		
Vidal Blanc	W	Oct. 12 – 15	8.75		0.72
Vincent	R	Oct. 12 – 15	8.75		0.72

Prices and availability are subject to change without notice.

Please indicate at the time of ordering if skins are desired for red varieties. Pre-ordering skins does not guarantee availability.

50-99 Gallons (600#+Crushed) - less 5%; 99+ Gallons (1200#+) - less 7%
Approximately 12# of crushed fruit/gallon of juice (variety dependent) [50# minimum]

Juice pick-up days are Thursday-Sunday 9am-5pm only.

❄️ Crushed Reds available Tuesday mornings ONLY ❄️

We are NOT ABLE to assist loading containers into your vehicle.

**U-Pick grapes must be picked by the
WEEKEND PRIOR to availability dates listed above!**

Varietal Descriptions

WHITES JUICE/VARIETAL

AROMELLA: Pineapple, honeysuckle, citrus and muscat character comes out in this NEW variety for us! This aromatic white varietal does well with cool fermentation to preserve and enhance the floral and fruity aromas. QA23, would be recommended for this variety. Suitable as a varietal or for blending.

CATAWBA: Fruity aromas with a slight “foxy” character produces enjoyable wines that can be made sweet or nearly dry. High acidity makes this a good wine for blending. A large component of RED ZEPPELIN.

CHARDONNAY: The most prestigious French white cultivar. An appealing fruity fragrance resembling pear, fig, apple, or melon. Produces sparkling wine (Blanc des Blancs), table wines and oaks well. Commonly put through ML.

CAYUGA WHITE: Fruity with aromas of apple, citrus and tropical fruit, ages well and is easy to work with. Excellent character and a rich mouth-feel.

DELAWARE: A very pleasing wine of good balance and not much “foxy” character. Great for spicy champagne-style wines. Juice can be white to pink.

DIAMOND: Diamond is well balanced, clean, and fruity. Does well as a dry table wine and sometimes used in the production of Champagne style wines.

HIMROD: A Moscato style grape we use for our “Matinee” wine. Known for its sweet and delicate flavors, it can have notes of ginger if fermented to completion. Fermented halfway, it can produce notes of kiwi and lime.

LAKEMONT: Developed at Geneva, Lakemont blends well with Catawba and is a good addition to a “Matinee” style wine. Makes a superb dessert-style wine.

NIAGARA: Intense “grape” and “foxy” aromas, and can contribute “diesel” notes when very ripe. Niagara commonly lacks acid for balance. Blending with a higher acid grape such as Catawba, Vignoles, or Delaware will add complexity.

RIESLING: Germany’s most respected variety. Fresh, aromatic wines ranging from dry to sweet. Aromas of roses and citrus. Exceptional quality in the Finger Lakes and is considered to be the “King” of Finger Lakes Wines.

SAUVIGNON BLANC: A gem in the Finger Lakes, this variety takes on the characteristics of its European counterparts. Citrusy, acidic, and fresh, with herbal notes. Can be oaked, but usually not, also good for sparkling, and dessert wines.

TRAMINETTE: A Cornell Hybrid (Joannes Seyve 23.416 x Gewürztraminer), makes wines of semi-dry to dry finish can have good body and a slight Gewürztraminer character. Floral aroma, spicy flavor, and good acidity.

VALVIN MUSCAT: Consistently produces wines of high quality with spicy and floral aromas. Highly aromatic, this variety can have an orange spice character to it. A highly sought after variety for both the commercial and home wine maker.

VIDAL BLANC: Probably the best of the French hybrids. Can resemble Riesling. Excellent in the production of dessert-style wines. Great for beginners.

VIGNOLES-RAVAT 51: Resembles Riesling in character, exceptional quality, award winning dessert style wines with high acid and good balance. Crisp with a tropical fruit nose.

RED JUICE/VARIETAL

Many reds are improved in color and body when fermented with skins. When placing your juice order -- request skins, if desired. Skins are highly perishable and may only be available for a short time.

BACO NOIR: Early ripening variety in the Finger Lakes produces full bodied red wines of excellent quality, good aging ability. Aromas can have herbal character. Does well with a secondary malo-lactic fermentation.

CHANCELLOR: One of our best reds - full-bodied European character with notes of plum and apple. Used to blend with other hybrids or as a varietal.

CONCORD: Our most popular variety for canning, and wine, fruity, robust wines often made sweet or slightly dry. Lambrusco style, "foxy", jammy, pleasant. Can be made to a dry or sweet wine.

COROT NOIR: A red hybrid variety developed by Cornell University that is suitable for blending or as a varietal. Deep red color, attractive cherry and berry fruit with good tannin structure.

DeCHAUNAC: Excellent full-bodied Bordeaux type wine, ages well. Good varietal character, very popular and is the best value for a full bodied red variety.

LEON MILLOT (FOSTER): A sister seedling of Marechal Foch, makes a full-bodied varietal wine with a unique Burgundy style.

MARECHAL FOCH: Produces many wine styles, ranging from a light red wine similar to Beaujolais, to more full-bodied wines with intense dark color and unique character. Great as a blender or in Port-style wines. This variety tends to have strong acidity and aromas of black fruits. Well-balanced and high in sugar, Maréchal Foch makes nice wines which can be consumed young.

NOIRET: A dark red variety with a distinct black or white pepper aroma and flavor. We sometimes blend it with other reds such as Foch or Cabernet Franc.

ROSETTE: A French hybrid variety which was named in the Finger Lakes. A light red variety which does not require a skin fermentation and fermentation "off the skins" is recommended. Pleasant flavor, fruity aromas.

ROUGEON: Excellent color, medium bodied wines, blends well with other reds. Blends excellent with Catawba to produce RED ZEPPELIN.

VINCENT: An inter-specific hybrid that was developed in Ontario, Canada at the Vineland Research Station in 1967. Vincent was developed to grow well in a cold climate and is the last variety to be harvested in the fall. Very dark color. full-bodied table wine, popular also for port.

Please indicate at the time of ordering if skins are required (red varieties only).
Skins may not be available, even if pre-ordered, and without notice.

All reds are available as fresh crushed fruit. Typically the Tuesday before dates of availability and only at the time of pressing. Call 607-678-4003 for information.

ALL GRAPES LISTED FOR "U-PICK" CAN BE PICKED THROUGH THE
WEEKEND BEFORE the POSTED "AVAILABLE" DATES.

607-678-4003 www.fulkersonwinery.com/juice

Basic Equipment Needed: (included in Winemaking Kit [\$market price])

2, 5 Gal Glass Carboys

1, 1 gal Glass Container

2, Fermentation Locks

1, No. 6.5 Rubber Stopper

1, No. 6 Rubber Stopper

1, 2oz Potassium Meta-bisulfite

Siphon Kit for Racking Wine

Wine Yeast, Yeast Nutrient, Pectic Enzyme

Bottling supplies for approximately 25

bottles of wine. (not included in kit)

We will be UNABLE to refill containers smaller than 2 gallons.

We are unable to lift full containers or to help load any vehicles.

WINE YEAST RECOMMENDATIONS and CHARACTERISTICS

Pasteur Classique (Montrachet): 5g \$1.50; 500g: \$32

(15% alcohol tolerance) All-Purpose. Produces a faster fermentation for full-bodied red and white wines. Optimal fermentation temperature 15°C - 35°C (59°F - 95°F). Well adapted for high quality red and white wines with complex varietal aromas. Resistant to low nutrient contents.

This strain tends to foam more than others. Recommended for buttery or creamy red wines.

Cote Des Blancs: 5g \$1.50; 500g available

(>14% Alcohol tolerance) Moderate fermenting strain ideal for Riesling, Gewurztraminer and Chardonnay. Able to ferment at low temperatures 12°C - 14°C (53°F - 57°F). Produces very fine fruity aromas. Good for fruit wines. Highly recommended for Riesling. Recommended for Chardonnay, meads and fruit wines.

Premier Cuvee: 5g \$1.50; 500g available

(18% Alcohol Tolerance). A fast, clean, and neutral fermenter for allowing varietal expression. Ferments at a wide temperature range 7°C - 35°C (45°F - 95°F) and ideal for sparkling wines, and to re-start stuck or sluggish fermentations. Recommended for white wines.

Premier Blanc (Pasteur Champagne): \$1.50; 500g available

(16% alc. Tol.) Best for white wines, and re-starting stuck fermentations. Good with low fermentation temperatures (14C [57F]). Produces clean aromas. Recommended for sparkling wines.

Laivin ICV-K1 (V1116): 1g: \$1.50; 500g and 10kg available

(up to 18% Alcohol Tolerance) Selected from numerous "killer strains", this strain produces strong floral esters when fermented at low temperature (16°C/65°F) Ferments well under stressed conditions (especially under extreme temperatures, high alcohol or low turbidity) and produces consistent floral and fresh aromas.

A long lag phase with a moderate fermentation rate. Ferments in a large temp. range 10°C-35°C (50°F-95°F) with low H₂S production. Ideal in difficult fermentation conditions and *re-starting stuck fermentations*. Ideal for Ice Wines.. Highly recommended for re-starting stuck fermentations. Recommended for late harvest and sparkling base.

Laivin 71B-1122: 5g: \$1.50; 500g and 10kg available

(14% Alcohol Tolerance) Known for fermenting Fruity Rosé wines and semi-sweet whites because it produces long lived aromas that result from the synthesis of relatively stable esters and higher alcohols. However it is sensitive to competitive factors and may have difficulty competing with wild yeasts.

This all-purpose yeast does well in most fermentation conditions, and can metabolize malic acid. Fast starter, with a moderate fermentation rate, will tolerate a temperature range of 15°C - 30°C (59°F - 86°F). Recommended for fruity rosé

wines and semi-sweet whites. Highly recommended for fruit-forward reds, Riesling, Rosé, and high-acid wine musts.

Lalvin ICV D-47: 5g \$1.50; 500g and 10kg available
(14% Alcohol Tolerance) Selected for the production of full-bodied, barrel fermented Chardonnay and other white wines. Wines fermented with this strain are known for accentuated fruit and volume. A fast starter, followed by a regular fermentation. Optimal fermentation temperatures of 15°C - 20°C (59°F - 84°F). Sensitive to temperatures below 15°C (59°F). Highly Recommended for Chardonnay, and Rosé.

Lalvin ICV QA-23: 5g \$1.50; 500g and 10kg available
(16% Alcohol Tolerance) Good for Chardonnay and Gewürztraminer. Has a low nutrient and oxygen requirement with optimal fermentation temperatures of 15°C - 32°C (59°F - 88°F). Good for Ciders as well. Highly recommended for Chardonnay, Gewürztraminer, Aromatic Whites and cider. Recommended for Riesling, muscat varieties.

Lalvin RC-212: 5g \$1.50; 500g and 10kg available
(16% Alcohol Tolerance) Average start, great for full bodied reds especially Pinot Noir. Produces ripe berry, bright fruit and spicy characteristics. This strain is known for its ability to generate wines with ripe berry, bright fruit and spicy characteristics and to consistently produce Pinot Noir with good tannin structure. Moderate fermentation rate with temperature range of 20°C - 30°C (68°F - 86°F). We highly recommend the use of yeast nutrient with this strain in multiple stages. Highly Recommended for Cabernet Sauvignon, Pinot Noir and Rosé.

Lalvin BM 4X4: 5g \$1.50; 500g and 10kg available
(16% Alcohol Tolerance) This yeast is actually a blend between B45 and a complimentary yeast to give it greater reliability under difficult conditions. Characteristics of this variety include increased mouthfeel and improved color stability. It does however have a high nitrogen requirement, We recommend adding ½ of the required yeast nutrient at the beginning of fermentation, and half at the mid-point. 28°C - 28°C (64°F - 82°F). Highly recommended for Chardonnay, Cabernet Sauvignon and Structured Reds.

Lalvin EC-1118: 5g \$1.50; 500g and 10kg available
NOT RECOMMENDED for primary fermentation: Strong competitive character, ability to ferment at low temperature, good flocculation and excellent alcohol tolerance (18%). Our first choice for secondary fermentation of sparkling wines. Also good for restarting stuck fermentations. May inhibit malolactic fermentation. 15°C - 25°C (50°F - 80°F). Highly recommended for secondary fermentation for Sparkling Wine.

**ALL WINE YEASTS ARE IN 5g SATCHETS
BULK YEAST (500g and 10Kilo PACKS) MAY BE AVAILABLE IF
ORDERED AT LEAST 2 WEEKS IN ADVANCE.
Bulk yeast orders PLACED BEFORE September 1st ARE APPRECIATED
CALL 607-678-4003 FOR PRICING**

The above chart is for reference only.

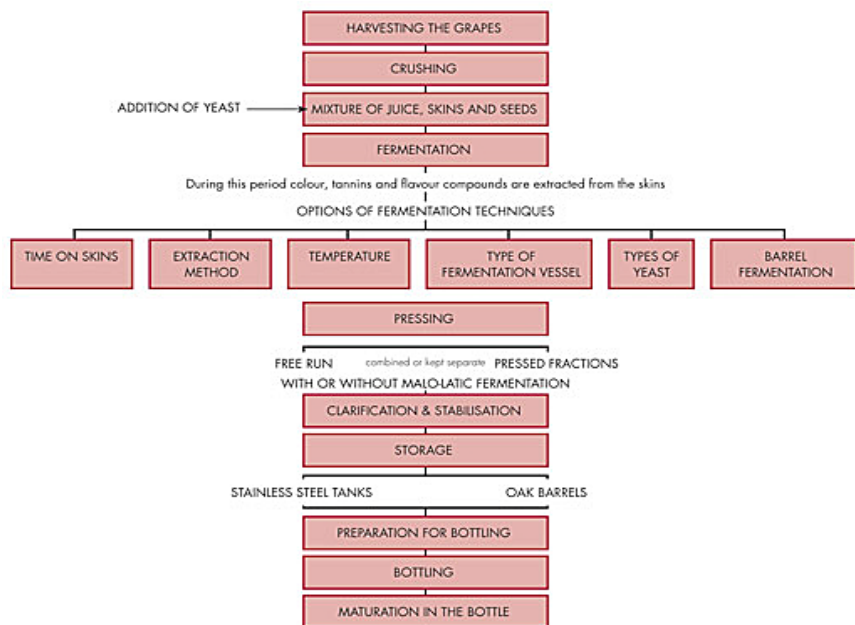

This chart contains recommendations made by our staff, as well as by the companies that produce the yeasts.

These are categorized by ‘recommended’ and ‘highly recommended’. Depending on desired style, or past experience, you may choose to use a yeast not indicated in as recommended for any given variety. Red wine varietals fermented without skins can be treated as a Red Wine OR a Rosé

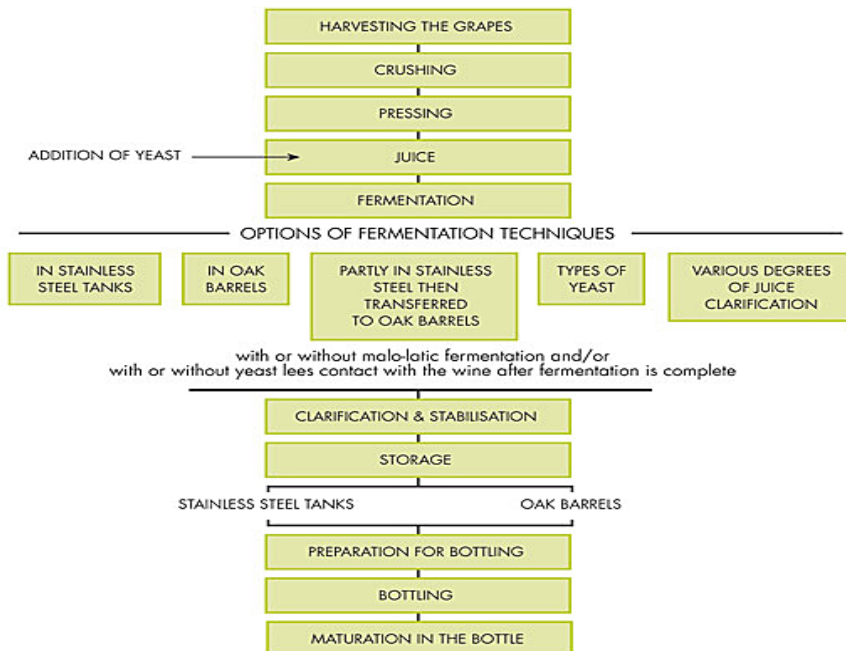

The above list may contain grape varieties that may not be listed for sale by Fulkerson Winery.

PROCEDURE FOR MAKING WINE

PROCEDURE FOR RED WINE

PROCEDURE FOR WHITE WINE

Looking at the flow charts, if you are getting crushed fruit, or you are adding skins back to red juice, you will be starting at the "Mixture of Juice, Seeds, and Skins" step on the procedure for making red wine. If you will not be adding skins to red juice, or picking up white juice, you will be starting at the "Juice" step on the procedure for making white wine.

REQUIRED EQUIPMENT

1. Carboys [at least 2, one for fermentation, another empty to rack into] or other containers for Fermentation. These can be Glass, Stainless Steel, Plastic or Wood (in order of recommendation). White, food grade plastic buckets, or HDPE Hedpaks are the only plastic container we recommend fermenting in. *Colored buckets (such as from hardware stores), or water jugs can leech out harmful chemicals during the fermentation process and should never be used, or only used for transport.* We always recommend glass as our first choice, and do not recommend wood containers (barrels) for the home winemaker.
2. 1 Gallon Jug for allowing excess fermentation headspace in main container. This decreases the chance of overflow due to foaming.
3. Airlocks (2)
4. Stoppers for carboys (if applicable)
5. Racking Kit containing at least the following: Racking Cane, Siphon Tubing, Bottling wand.
6. Chemicals:
 1. *Potassium Meta-bisulfite*: Sterilizing agent and antioxidant; Protects wine from spoilage organisms and oxidation.
 2. *Yeast Starter*: Malt sugar used to start a yeast culture. [optional]
 3. *Yeast Nutrient*: Nitrogen source for yeast to carry out a healthy fermentation, can reduce risk of 'reduced' or stinky flavors.
 4. *Pectic Enzyme*: Breaks down pectins which cause haziness in the wine, decreases chance of needing additional fining agents.
 5. *Yeast*: Our Winemaking Kits contain Lalvin 71-B yeast, however please see full yeast recommendation chart and descriptions (pages6-8) for further recommendations.
 6. *Sugar*: This is for chaptalizing your juice to a potential alcohol of either 10 or 12 percent. You will receive whole juice, which has nothing added to it. Please use sugar recommendation chart on page 13 to determine how much sugar you will need. We recommend Dextrose, or corn sugar because it is easier to dissolve as well as easier for yeast to consume.
7. Hydrometer and Test Jar: These are used to measure the amount of sugar in a liquid by floating the hydrometer in a column of juice, and reading the sugar level on the shaft of the hydrometer where it floats.
8. Corker: Used to insert corks into bottles once wine is finished. We Recommend using the Portuguese Floor/Bench Corker, or the Italian Floor corker. These will last the longest, and cost you less in the long run, other corks are available. Certain corks do not work in all corks.

NOTE FOR CHEMICAL ADDITIONS TO JUICE: If a juice is fermenting when you get it home, or if it's left to ferment naturally prior to the addition of chemicals or sugar, this can cause the wine to foam excessively resulting in a geyser like formation coming out of your carboy. Please take 2-3 gallons out of the carboy/bucket to add your sugar and chemicals in another bucket or pot if the juice is fermenting when making any additions. (Think mentos and cola)

PROCEDURE TO FOLLOW

1. **Sterilize all equipment: 2 tsp. Potassium meta-bisulfite per gallon of warm water as a sterilizing solution is sufficient for most applications. Sterilize all equipment including carboys and anything that will touch wine or juice. Rinse with clean water. Tap water is fine, however avoid using any water treated with Chlorine, as this may cause a spoilage characteristic called 2,4,6-Trichloroanisole (TCA) or 'Cork Taint'**
2. Bring juice up to room temperature for primary fermentation by allowing to sit in ambient temperatures overnight. White wines typically ferment between - 60°F-70°F, and Red wines between - 70°F-80°F. This can be yeast specific, along with style choice. Please refer to yeast descriptions on pg. 6-8.
3. Start a yeast culture by adding 4tsp of the malt sugar (Yeast Starter) to approximately 1c of warm water or warm juice and add your yeast packet, let sit approximately ½ hour to ¾ hour in order to rehydrate and 'proof' similar to the process used for breadmaking.
4. Adjust acid and sugar per recommendations on website, and add other ingredients to juice. *IF JUICE IS ALREADY FERMENTING, ANY ADDITION MAY RESULT EXCESSIVE FOAMING. Please take care when adding anything to fermenting juice, as it may make a mess.*
 1. Add Yeast Nutrient at the rate of 1tsp/gallon to your juice (Crushed Fruit has a different rate, which is listed on bottle).
 2. Add Pectic Enzyme per recommendations on bottle.
 3. Measure Brix or Specific Gravity Reading using a sterilized hydrometer and record all results. This will be your Original Gravity or "OG", or if using Brix scale, convert to potential Alcohol (pg13).
 4. Add required sugar to achieve desired potential alcohol level by following chart on pg 13. Sugar used in chart is "DEXTROSE" corn sugar. *Using table sugar (sucrose) will require less but be harder to dissolve. Multiply numbers in table by [(dextrose)(.92)] to obtain #'s of sucrose per gallon. (see note on additions on previous page)*
5. Siphon approximately ½- gallon of juice into sterilized 1 gallon container to allow for ample headspace for fermentation in both containers. (Approx. 4.5 gallons should remain in carboy). This will decrease the chance for a 'blow over' event caused by excessive foaming.
6. Add 4/5 of yeast culture (which has been proofing) to carboy, add the rest to the gallon jug. Alternatively, yeast may be added directly from packet into carboys, however results may vary. Proofing is recommended.
7. Fill your airlocks half full (or to fill line) with water, insert them into a rubber stopper prior to placing them on your carboy and gallon jug. Insert into grommets lid on buckets.
8. Ferment:
 - a. Ferment red wines for 1-2 weeks in a pail with skins (do not ferment skins in glass carboys) punching (stirring) skins into the wine once or twice daily depending on desired tannin level (the more you punch the skins down, the more tannin will be extracted. Once the skins stop floating/raising to the surface of the wine, fermentation is complete and you may press wine off skins by scooping skins out of the bucket and pressing with cheese cloth or by hand. (typically 4-6 days or when they fall into solution). Then continue to follow directions for white wines.
 - b. Ferment white wines and reds without skins (rosés) for 1-4 weeks until a clear line of sediment forms at bottom of container, and the wine clears.

AFTER PRIMARY FERMENTATION IS COMPLETE

1. When you see a clear line of sediment and the airlock has slowed down, or has stopped, it's time to rack your wine leaving the sediment behind.
2. **Rack off wine into a sterilized carboy using your racking cane, and siphon tubing. Racking is done by siphoning clear wine off of sediment. Discard sediment: clean dirty carboy immediately, or it may be hard to clean later.**
3. Top off carboy by racking wine in the gallon jug back into your carboy and store any extra in refrigerator for future topping-off of your carboy. (If there is not enough wine to top off your carboy, there is usually enough CO₂ in solution to protect it from spoilage.)
 1. Check Brix or specific gravity (SG) to get a final gravity (FG) reading by using a sterile hydrometer and test jar. Siphon wine into test jar and use hydrometer to get a reading, record results.
 2. Use the following formula to calculate the approximate alcohol level of your wine: $(OG \text{ --- } FG) \times (.0075) = \text{---} \%$ Record results and tasting notes. If using the Brix scale, convert Brix to Potential Alcohol [PA] use $(PA_{\text{start}} - PA_{\text{end}} = \text{Approx Alcohol Level.})$
4. **[optional] (FOR MALO-LACTIC FERMENTATION, DO NOT ADD META-BISULFITE as it will kill any bacteria you add as culture.**
 1. **Warm wine up to 70°F-75°F, add Malo-Lactic Bacterial culture, let the bacteria ferment until another sediment layer forms (approximately 6-8 weeks) and rack again. Continue to step 6.**
5. Add ¼ tsp. Potassium meta-bisulfite to carboy for oxidation prevention. Meta-bisulfite also kills bacteria that may cause spoilage.
6. Place airlock back onto the carboy.
7. Age until a clear line of sediment has settled to the bottom. (Between 1-2 months) (keep an eye on the water level in your fermentation lock. If fermentation locks are allowed to evaporate, or are empty, oxygen can get into your container allowing for oxidation of your wine.)

AFTER SECONDARY FERMENTATION/AGING

1. **Cold stabilize your wine to take out Potassium Bi-Tartrate (cream of tartar) crystals that form by cooling the wine down to 29-32 degrees for two weeks or more. (Easiest way to do this is to bury your carboy in about a foot of snow for 2-3 weeks. Mark it well with a flag. You will see potassium bi-tartrate (cream of tartar) crystals form and fall to the bottom of your carboy.**
2. Rack wine while it's still cold to prevent crystals from re-dissolving, leaving the crystals behind.
3. Add an additional ¼ tsp. potassium meta-bisulfite to prevent spoilage and oxidation. A total of ½ tsp. should be added during the process. Once after primary (or if performing Malo-lactic fermentation, after that process) and once after Cold-Stabilization.
4. *****IF SWEETENING, or if sugar is present after fermentation (residual sugar or "RS"), adding potassium sorbate, or sterile filtering with .5 micron or less filter pads after racking is required. **(For home wine makers using filters, filtering may not be a guarantee to stop a re-fermentation, sorbate is still recommended after sterile filtering)*** Bottle 24-48 hours after the addition of sugar and sorbate to allow live yeast to die. When adding Sorbate, potassium meta-bisulfite addition is required to prevent a Malo-Lactic bacteria from fermenting sorbic acid (a biproduct of sorbate addition), which can cause 'geranium taint' which is not reversable/treatable and is quite undesirable.

SUGAR RECOMMENDATIONS

Hydrometer Reading		Sugar Content		For 10% Alcohol		For 12% Alcohol	
°Brix/ Balling	Specific Gravity	Solids/ Gal (lbs)	Potential Alcohol	Dextrose lb\5Gal	Dextrose oz/gal	Dextrose lb\5Gal	Dextrose oz/gal

22	1.091	1.999	12.1%	Balling - Percent solids [most of which are sugars] by weight in a liquid. (°brix). <i>Measurements not precise; alcohol yields differ under different fermentation conditions.</i>			
22.5	1.094	2.049	12.4%				
23	1.096	2.099	12.7%				
23.5	1.098	2.149	13.0%				

The preceding recommendations are based on "Dextrose", or corn sugar.

Sucrose calculation: 1lb Dextrose is the equivalent to .92lb of Sucrose

Corn Sugar is available in 50# Bags with a pre-order.

TO CALCULATE APPROXIMATE ALCOHOL PERCENTAGE:

Take hydrometer measurements before and after fermentation.

Original Potential Alcohol (PA) - Final Potential Alcohol = Alcohol Concentration

Original Specific Gravity (OG) - Final Specific Gravity (FG) * .0075 = Alcohol
 (OG____ - FG____)*(0.0075) = ____% Approx. alcohol by volume

All measurements are approximate and may differ depending on circumstances.

SUPPLIES and EQUIPMENT

(Prices and availability are subject to change)

PROCESSING EQUIPMENT:

AL/Stainless Fruit Press220.00
Manual Crusher Destemmer..480.00
Stand for Manual Destemmer205.00
